

## Technology in Shanks 380

Fall 2007

Computers in 380 have been updated in the fall of 2007. They are all connected to the internet. You might want to use them if your computer is being fixed, if you have a need for the projector, if you need to convert a VHS or Mini DV to DVD, if you want to scan images or PDFs, or if you want to create podcasts.

This is a communal resource. The more it is used, the more we can justify adding new software and maintaining the current setup.

If you do use any of these computers, please delete your files after you are done using the computer. Please understand that if you don't clean up after yourself, someone else is likely to throw it out later.

Here is a list of the computers there and the software installed on each. (All versions of Office include MS Word, PowerPoint, and Excel.)

### **iMac Web Editing computer, with iSight. Connected to a SanDisk External Harddrive and a large format flatbed photo scanner**
